OLAWOORE USAMAH ABIDEMI

FULL-STACK SOFTWARE ENGINEER | CTO, ALTRIS PRODUCT SYSTEMS

+234 911 745 0722 | olawooreusamahabidemi@gmail.com | Nigeria (Remote) | linkedin.com/in/usamah-abidemi
Portfolio: everbestdev.vercel.app | GitHub: github.com/EverbestDev

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 3+ years of experience building and shipping production web platforms in TypeScript and Python. Currently a full-time remote Full-Stack Software Engineer at StreetOps and CTO of Altris Product Systems, where I lead the engineering of Afribase (an open-source backend platform for African developers), Rekora and client products. Experienced in designing REST APIs with NestJS, Express, Next.js and FastAPI; modelling data in PostgreSQL (Prisma) and MongoDB; implementing JWT, RBAC and two-factor authentication, Stripe payments and transactional email; and building fast, responsive, animation-rich interfaces with React, Next.js, Tailwind CSS, GSAP and Framer Motion. I own products end to end, from architecture and database design to deployment on Vercel, Render and Docker, for paying clients in healthcare, hospitality, fintech and politics.

PROFESSIONAL EXPERIENCE

Full-Stack Software Engineer
StreetOps — Full-time, Remote (Contract) **2026 – Present**

- Lead developer on GummyGum, StreetOps' team-culture and employee-engagement platform (Next.js, TypeScript, Firebase), and built 13 live interactive team experiences on it, including Sabi Quiz, Townhall, Lucky Spinner, Story Swap and Guess Who.
- Refactored GummyGum from a 9,000+ line monolith into a modular, single-responsibility architecture, making features faster to build and safer to change.
- Built the backend for Paige, StreetOps' research and insights platform: Express/TypeScript API on PostgreSQL with JWT auth, TOTP two-factor login, rate limiting and Zod validation, plus a Next.js admin with Resend/React Email notifications.
- Built StreetAsk, a polls and survey product with PDF report export, and the StreetOps operations dashboard in React and TypeScript (Zustand, Recharts, shadcn/ui).

Chief Technology Officer (CTO)
Altris Product Systems **2026 – Present**

- Set technical direction and architecture for Altris' products and client builds; lead the engineering team through code review, Git workflows and deployment.
- Afribase: open-source Firebase/Supabase alternative for the African market, providing authentication, auto-generated REST APIs, realtime subscriptions over WebSockets, storage and multi-tenant organisations; built the Next.js developer dashboard and documentation portal with JavaScript, Python and Dart SDK guides.
- Rekora: trading-education platform with a FastAPI and PostgreSQL backend, Redis, a MetaTrader 5 bridge for live prices and trade management, and video course delivery; Next.js frontend, Dockerised and deployed on Render.
- D'Franklin Apartments: hotel booking website redesign for a serviced-apartment brand in Abuja (Next.js 16, TypeScript, React Hook Form, Zod) on Afribase, the first phase of a full hotel management system.
- LexLearn: AI-graded computer-based testing platform for schools, with admin, teacher and student roles, class cohorts, multi-subject assessments and controlled result release; integrated LexAI semantic grading for theory answers and bulk question import from PDF, Word and Excel (Next.js, Prisma).

Freelance Full-Stack Developer
Client Projects (Paid Contracts) **2025 – Present**

MOMSComfort — Maternal Healthcare Platform ***React, Express, Prisma, PostgreSQL | 2026***

- Built the platform for a HEFAMAA-accredited midwifery service in Lagos: multi-step appointment booking, a product store with cart, transfer-payment verification and WhatsApp checkout.
- Built the staff admin panel (Next.js) and an Express, Prisma and PostgreSQL API, with branded transactional email notifications.

Political Campaign Platform — Ijebu Central Federal Constituency ***Next.js, Prisma, PostgreSQL | 2026***

- Built the campaign website, admin panel and API for an APC House of Representatives candidate, using Next.js 16 route handlers, PostgreSQL/Prisma, JWT authentication and Brevo transactional email.

Bazetwo Barbers — Booking & Payments Platform ***React, FastAPI, MongoDB, Stripe | 2026***

- Built a grooming booking platform with service and barber selection, Stripe payments, QR-code booking verification, and separate customer, barber and admin dashboards (React 19, Vite, GSAP).
- Developed the FastAPI and MongoDB backend with JWT auth, Google Sign-In and Cloudinary media; also launched Bazetwo Cares (cares.bazetwo.com).

ILI-Nigeria — Multilingual Services Platform ***Translation & Interpretation Marketplace | 2025 – 2026***

- Built and deployed a multilingual service platform connecting users to professional translators across 200+ languages, featuring a responsive React frontend with dynamic language switching.

- Engineered backend architecture using Node.js, Express, and MongoDB, integrating Firebase Authentication, Cloudinary media storage, and WebSocket-based real-time communication.

Zula — WhatsApp-Based E-Commerce Platform ***Commerce Platform with Messaging Checkout | 2026***

- Designed and launched a full-stack e-commerce web platform with product catalog, filtering, and cart management using React.
- Developed backend services using FastAPI (Python) and MongoDB with JWT authentication, integrating WebSockets, Brevo email automation, Cloudinary media storage, and WhatsApp-based checkout workflows.

SSCF — Solace Sickle Cell Foundation Website ***Full-Stack Contract | 2026***

- Designed and developed a modern foundation website using React and Framer Motion with interactive UI components and responsive design.
- Implemented structured content sections showcasing programs, warrior support resources, and downloadable educational materials.

Software Engineer Intern
Solace IT Ltd — Ogun State **2023 – 2025**

- Assisted in backend development using Node.js, Express, and MongoDB, building CRUD service modules and authentication workflows for internal systems.
- Supported frontend improvements, debugging, deployment preparation on Linux hosting environments, and maintained version control workflows using Git.

SELECTED PROJECTS

Entrix — Event Ticketing Platform (Personal Startup) ***React, NestJS, Prisma | 2026 – Present***

- Founded and built an event ticketing platform where each event owns its tickets, orders, attendees and team members, with QR-code ticket scanning at the door and sales analytics.
- Built the NestJS and Prisma backend with JWT/Passport auth, rate limiting, Helmet, Swagger API docs, QR ticket generation and Google account integration, running on Afribase.

E-Attendance — University Platform ***Geospatial & AI Attendance System | 2025 – Present***

- Engineered backend services for a university attendance system integrating geofencing and OpenCV-based face recognition to prevent proxy attendance.
- Built REST APIs using Python (FastAPI) and MongoDB with JWT authentication, implementing spatial validation logic and optimized queries for reliable performance under concurrent usage.

Kommunity — Community Management Platform ***Multi-Tenant Activity & Land Management | 2025***

- Developed backend architecture for a multi-tenant community platform managing activity coordination, land ownership, and tenancy workflows.
- Designed scalable Node.js/Express REST APIs with MongoDB, implementing JWT authentication, RBAC authorization, and optimized database operations for consistent API performance.

TECHNICAL SKILLS

Primary Languages: Python, JavaScript (ES6+), TypeScript, C++, HTML, CSS
Backend & Frameworks: NestJS, Node.js, Express.js, FastAPI, Django REST Framework, Next.js Route Handlers, REST APIs, GraphQL, Microservices, Swagger/OpenAPI
Frontend & UI/UX: React.js, Next.js, Vue.js, Tailwind CSS, shadcn/ui, Redux, Zustand, Vite, React Hook Form, animation libraries (GSAP, Framer Motion, Lenis)
Databases & ORMs: PostgreSQL, MongoDB, MySQL, SQLite, Prisma, SQLAlchemy, Redis
Backend Platforms: Afribase, Supabase, Firebase
Security & Authentication: JWT, OAuth2 (Google Sign-In), TOTP Two-Factor Auth, RBAC, Rate Limiting, Helmet, Request Validation (Zod, class-validator)
Real-Time & Messaging: WebSockets, Socket.IO, Redis Pub/Sub, BullMQ
Payments & Communications: Stripe, Paystack, Twilio (SMS), SendGrid, Brevo, Resend, WhatsApp Cloud API, Push Notifications
DevOps & Tools: Docker, Git, GitHub, Vercel, Render, Cloudinary, Postman, Figma

SOFT SKILLS

Independent Remote Work & Self-Direction • Project Ownership & Accountability • Technical Leadership & Code Standards • Clear Communication & Documentation • Analytical & Data-Driven Problem Solving • Cross-Functional Collaboration • Adaptability & Rapid Skill Acquisition • Mentorship & Knowledge Sharing • Resilience Under Pressure • End-to-End System Thinking

COMMUNITY & EXTRACURRICULAR

- Startup-Driven Builder — Active contributor to Nigerian developer communities, open-source projects, and student tech hackathons.
- Team Mentor — Coached peers in Python, backend architecture, Django, AI integration, and full-stack development across multiple engineering cohorts.

EDUCATION

Bachelor of Science (B.Sc.) in Computer Science (In View)
2024 – 2027
Tai Solarin Federal University of Education, Ijagun

AWARDS & ACHIEVEMENTS

- 1st Place — EdTech COE TASUED Hackathon v2 (2025)
  Built *E-Attendance*, a geofenced university attendance platform integrating face recognition (OpenCV), FastAPI backend, MongoDB, and secure JWT authentication to prevent proxy attendance and improve institutional tracking accuracy.

- 4th Place — EdTech COE TASUED Hackathon v1 (2024)
  Developed *VisionAI*, an AI-powered virtual classroom platform built with React and Node.js, featuring interactive learning modules and structured content delivery.
